

Carillon Practice Keyboard

by Chime Master

An affordable practice instrument for home or institutional use

How often are you able to access a practice keyboard to maintain the proficiency you know you need to play anywhere with confidence? Until now, practice keyboards have been expensive, heavy and relatively rare. The Chime Master carillon practice keyboard weighs less than 250 lbs, breaks down into separate keyboard and pedalboard modules that two

people can easily transport and set up. You can affordably build it yourself or we can deliver and set it up for you.

You will find that the keyboard is playable and dynamically responsive, with an adjustable light to medium weighted action for hours of comfortable practice.

Optional oak woodgrain skins, footrest, black and white plastic keys and sound module in oak

Optional carillon sound module mounted to keyboard

Affordable Kit

Quick-build kit assembly goes together like an erector set with included Allen wrenches. The aluminum frame members and related hardware ship directly from the manufacturer. Keyboard specific assemblies arrive from Chime Master. Scan the code below (bit.ly/ZH2jsr) and watch video of the frame assembly. Includes unfinished wooden batons and basic bench.

Assembled and Delivered

We can deliver and set the keyboard so that it feels and responds according to your own personal preferences.

Premium Options

Carillon Sound Module
