

Funeral Toll Selections

The steady striking of a bell is called a toll. Tolling functions are numbered 6100 to 6699. The second digit selects which bell to toll (1 through 6, only one at a time). The last two digits indicate length of time in 15-second intervals. For example, to toll the second to largest bell for three minutes, program 6212.

For funerals, you may wish to manually play a certain number of tolls. A single toll may be repeated from 1 to 199 times in either the **Play Selections** menu or programmed on a function button. The single-strike toll function is numbered like the timed functions above, but the last two digits are 00. For example, to toll the largest bell for 56 strikes, program 6100 056 time(s).

Faster Tolling Bells

The time strike tolls (1005 to 1016 for 1:00 to 12:00) can be used for faster tolls. For the Sanctus, or a Trinity bell (during the Lord's Prayer) you can use selection 1007. A distinctive Angelus can be built by ringing 1007, 1007, 1007 followed by 1013.

De Profundis

Selection 0063 rings nine tolls with a nine-second pause between each. This ring has traditionally been used as a curfew bell at 9 o'clock in the evening and to call the faithful to evening prayers.

4004	2,3,4	5004	4,5,6		

Consider that not all peal combinations will result in a pleasant chord. Specific combinations ideal for your installation should be noted for future reference. The second two digits select the length of time to ring in 15-second intervals. Here are some examples:

3201 = 15 seconds, bell two only

5110 = Two minutes 30 seconds, bells 1,2,3,4

5999 = 24 hours 45 minutes (max) all bells, 1-6

4004 = One minute, bells 2,3,4

3120 = Five minutes, bell one only
